The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7 and 8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Scholten et al (US 6,245,281).

Scholten et al teach a process for producing shaped articles by selective laser sintering of a nylon 12 pulverulent material (powder) in abstract.

With respect to the treated polyamide of claim 1, it is not required method step in the claims 7 and 8, and an invention in a product-by-process is a product, not a process. See In re Brown, 459 F2d 531, 173 USPQ 685 (CCPA 1972) and In re Thorpe, 777 F2d 695, 697, 227 USPQ 964 (Fed. Cir. 1985).

Also, the method claim 1 does not recite a particular melting point or enthalpy of melting, and thus the nylon 12 having a particular melting point or enthalpy of melting shown in abstract would inherently meet the instant treated polyamide powder. Furthermore, crystallization taught at col. 3, lines 52-55 of Scholten et al also inherently increases said melting point or enthalpy of melting.

Thus, the invention lacks novelty.

Method claims 1-6 and 9 remain allowed since the prior art (US 4,687,837 and 4,334,056) in the PTO-1449 teach utilization of polyamide solution, not the instant contacting of polyamide solid granule or powder with water, water containing methanol or steam.
